

The economic type level indicators are designed for machine manufactures to control the level of oil or other liquid outside of their vessels / tanks. They can be mounted horizontal or vertical.

Areas of Application :

Hydraulic tanks, pressure tanks, cooling tanks, decanter, hydraulic lines and oil tanks.

Technical Specifications : ELD 11 / 12 / 13 / 14 / 15

Connections	1/2"BSP Screwed Adaptor
Connections Material	Steel Op. 304 St.St.
Tube Material	Glass or plexiglass
Max. Working Pressure	5 bar
Max. Working Temp.	100 °C

ELD 11v / 12v / 13v / 14v / 15v

Connections	1/2"BSP Screwed Adaptor
Connections Material	304 Stainless Steel
Material of Ball Valves	304 Stainless Steel
Tube Material	Glass or plexiglass

Advantages :

- * Liquid easily can be discharged by changing valves position.
- * Easy installation
- * Indicator pipe can be choosen as different type of materials
- * Contact can be mounted as option
- * Resistant to high temperatures
- * Basınca dayanıklıdır.
- * Resistant to high pressure

MAGNETIC CONTACT

The magnetic contact works according to capacitive working principle and used to receive liquid flow information without any metal parts. Accuracy can be arranged via potentiometer setting and with a led, it gives visual information to users. It can be used as a flow switch. Beside it can be used to take min. and max. contact information.

It is used for observing process inside boilers and machines.
It is applied with seal between metal glonges for heat resistance, glasses are heat treated beforehand.

For borosilicate glass, max. temperature is 280 °C appropriate for DIN7080
(Depends on thickness of glass.)

For sodium silicate glass, max. temperature is 150 °C appropriate for DIN7080
(Depends on thickness of glass.)

Max. Pressure 40 bar (Depends on thicness of glass.)

Areas of Application :

Hydraulic tanks, compressed tanks, water tanks, generators,
hydraulic lines, pipe lines.
